

Low-Voltage Control Wiring System

Low-Voltage Cables

Easylite's ILS (Integrated Lighting System) uses Easylite's Plug and Play low voltage cables to replace line voltage wiring and eliminate the need for circuiting of lighting zones at the power panel.

With an Easylite ILS, you use Easylite's plenum rated Low-Voltage Cables to connect Easylite dimming ballasts and Easylite control devices. All Easylite Low-Voltage Cables and connectors are factory pre-terminated to ensure correct polarization and compatibility with all Easylite system components.

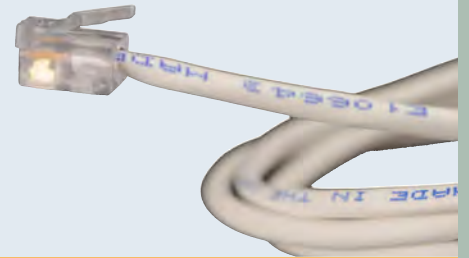

Advantages

Factory terminated and pretested

All Easylite low voltage cable is factory terminated and tested to ensure correct polarization and compatibility with all Easylite system components. Eliminates installer termination errors.

Plenum rated

Allows simple above ceiling field installation with direct runs between fixtures and controls: no need for conduit, junction boxes, or switch wall boxes.

Specifications

Five-Year Warranty

300V insulation

24 AWG four-wire cable

Plenum Rated

Class 2 CMP cable, NEC listed for installation with line voltage circuit wiring

Factory terminated with RJ-11 connectors

Available in 3', 6', 10', 14', 25', 50', and 100' lengths (other lengths made to order)
