

Egress/ Night Light Module

Fixture Module

Allows proportional dimming between 100% and 10% brightness, prevents off signal to dedicated egress fixtures. Most egress/night light fixtures run at 100% output day and night, but when you connect the Egress fixture module to dedicated egress fixtures, they respond to the Easylite ILS proportional dimming control signal, instead of always being on at full bright.

At night, the Egress fixture controller prevents an off signal from being passed to the connected fixture, and instead takes the fixture to full dim (10% light output).

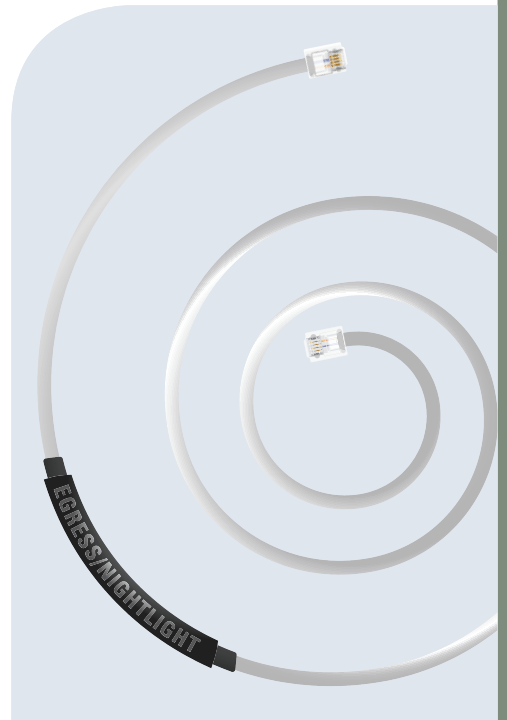

Advantages

Simple installation on dedicated fixtures.

Plug an Egress Module (night light) into the Easylite ILS control loop and the Easylite Ballast, and your Easylite ILS detects an off signal and causes the connected fixture to default to full dim output while the input control is off.

Energy savings through off hour dimming.

With an Easylite Egress Module, your dedicated egress fixtures track the Easylite ILS control signal input during scheduled operating hours, and during scheduled off hours, the fixture goes to full dim, cutting power use by 75%.

Specifications

Five-Year Warranty
Plug and Play, Ballast power and control

300V insulation
24 AWG four-wire cable
Plenum Rated

Factory terminated with
RJ-11 connectors

Dimensions
3' cable length

Voltage
0-10 Volt DC
